Waterslides

Creating smiles and adventures for your waterpark.

Runaway Bay
Jewell Beach, Jamaica

A Splashing Success

Taking a plot of dry dirt or outdated water features and transforming them into a thriving waterpark, that's what we do - over thousands of times.

From our innovative and fun designs to our industry-leading quality components and durable finishes, it's how you turn a waterpark into a splashing success.

American made. American ingenuity.

Looking around our office, I see a lot of big kids. Only they have patents, professional licenses and the best engineering and design skills in our industry. They know how to work with budgets. They're adept at foreseeing and overcoming challenges. They understand that a waterpark's success depends on uniquely fun, safe and durable waterslides.

Luckily, despite growing up, they never lost their imagination.

Remember when you were a kid? A trip to the waterpark was a summer highlight. Did you ever think, "this is so cool, but it would be 'awesomer' if it turned this way or that way or dropped here." Some kids are happy with what they see. Others always think, "what if?"

We answer the "what if?" every day. What if we developed software for ultimate design flexibility? What if we tagged each component for easy installation and logistics? What if we created a proprietary clear coat for exterior UV protection? And used triple gasketing to minimize water waste? Or exclusively used steel and fiberglass from the U.S.?

Those questions were answered on thousands of waterslide projects over decades. You'll benefit from not only our expertise, but also from our drive to innovate. The result is more attendance, ticket sales and smiling faces.

Orlando, Florida

Relationship Driven

We always remain true to our humble beginnings. Our boutique-style business allows us to be accessible, approachable and personable. We've built our company on our customer relationships and doing the right thing.

Body Slides

Splashtacular® body slides deliver a full range of ride experiences. Large or small, indoor or outdoor, open or enclosed, our slides can be engineered to fit any environment and budget. Our body slides are special because we use helical parts with built-in risers for few seams and a smoother ride. The profile of our slides are circular, making it far more comfortable and safer than a traditional U-shaped slide.

Single Rider

Indoor/Outdoor

Clear Coated Exterior

As one of our standards, we include an automotive grade clear coat on the exterior of each and every one of our slides. This protects it from sun bleaching and gives a glossy sheen that keeps them looking like the day they were installed.

Speed Slides

Guests have a need for speed? Splashtacular's® speed slides are renowned for an adrenaline-pumping, exhilarating, water-spraying good time. Whether as a stand alone or a large complex with multiple tandem slides, our designs are extremely flexible in matching your needs. Compliment these with translucent bands, DrenalineDrop, or top five timing systems and you'll have a winning formula to drive your ticket sales.

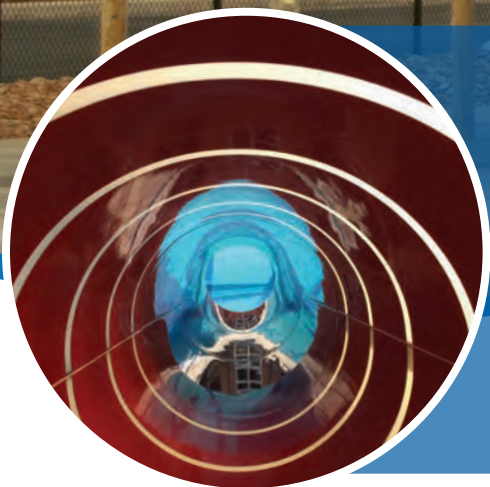

Single Rider

Double Thrills

High-speed

Proprietary Stair Treads

Our custom pultruded treads are some of the most comfortable and durable you'll find. We use a near-seamless design that incorporates the riser into the T-grating tread and includes a built-in 1" relief to keep from having any catch points. We then add an aggressive non-skid surface to grip all those wet feet without any concern for slipping. When installed, the risers and treads nest into one another for a smooth comfortable surface.

Drop Slides

Splashtacular® drop slides are a favorite among park owners. Providing maximum fun with a big plunge when riders drop into the deep end of the pool. They're a great addition to existing pools or where conserving space and money matters most.

Quality Coatings & Color Options

We use the very highest grade of coatings, from our super durable powder coat on our steel to our top quality gel coat formula on our waterslides. We even offer them in all seven colors of the rainbow, and 173 additional colors if that's not enough.

Family Slides

Can't decide who gets to go first? Why not try our fun for all-ages family slide! This is a great slide for everyone, especially for those who want to ride together.

Family Friendly

Splashworx

We developed our own in-house software to design and help engineer our waterslides. When subtle adjustments are needed, the program can quickly tweak designs to automate what was once a very slow and arduous task, making changes in seconds versus minutes or hours. This allows us to focus on fun designs and makes for easy collaboration with architects and owners.

Kiddie Slides

Our little family members love to join the fun too, that's why we offer our kiddie slide. It's perfect for kids and even entertaining for adults. The minimal space and water requirements makes it a great addition with any size aquatic facility. They start as a single slide, but can easily be paired into several lanes to add a little friendly competition.

Family Friendly

Ride Path Analysis

We run finite ride path analysis on our designs to ensure the smoothest and safest rides possible. The analysis examines multiple rider weights to predict what was once the unpredictable. No guessing needed here, we are sure to deliver a safe and comfortable ride each time.

Splash Bowls

A thrill ride with a mini-game. How many revolutions can you make? Our Splash Bowls are a quintessential water attraction for thrill seekers of all ages. Starting out as a fast body slide, you quickly find yourself riding into a large bowl, where you can test your riding technique to see how many times you can ride around before plunging into the pool below.

Excitement

Circular Motion

Enhancements

We offer an array of translucent effects including bands, custom shapes and full or partial sections of fiberglass. These can be combined with lighting and sound packages and even top five timing and dispatch systems.

Raft Slides

Splashtacular's® raft rides offer a thrilling and smooth ride with twists, turns and drops to keep the action exciting. Available translucent effects, lights and sound packages only add to the fun and make each ride a different experience every ride. Raft slides have several size options.
